

What's a CLI?

- Command Line Interface
- A command language is the part of the CLI with which the user interacts
- An interface used to configure most routers & servers
- \$78 billion of router & server hardware is sold each year, compared to \$187 billion in PC sales

(Gartner Inc, 2002 a, b, c)

Pros and Cons of CLIs

Pros

- **Efficient.** Combine commands and don't hunt through the GUI
- **Fast.** Text transmissions consume almost no network bandwidth
- **Flexible.** Write scripts to automate repetitive tasks
- **What many want.** Real geeks don't use GUIs

Cons

- CLIs rely on recall memory while GUIs rely recognition memory
- Recognition memory is almost 3 times more accurate and almost 2 times faster than recall memory (Nobel, 2001)

CLI Examples

```

Sun Microsystems Inc. SunOS 5.8 Generic February 2000

***          This machine runs Solaris 8          ***
***          Problems should be reported to IS    ***
*****

gosling@techok18: chood 777 CLI_issues2.txt
gosling@techok19:
    
```

UNIX

```

Router#show dhcp ?
  lease      show DHCP Addresses leased from a server
  server     show DHCP Servers we know about

Router#show dhcp server
dhcp Proxy Client Status:

+

Usability

=

Heuristics often compete, so you have to find the best trade off

Command Language Design, March 18th, 2003

UPA/STC Montréal

5

Heuristics: Structure & Familiarity

Structured Language

1. Balance power & simplicity
2. Use a hierarchical structure
3. Define rules & follow them
4. Model the industry standard
5. Use parallel words
6. Use the imperative mood
7. If inconsistent, do not model

Familiar Language

4. Model English
 - Use words, not symbols
 - Use familiar punctuation
6. Use meaningful words
7. Use shorter commands
8. Allow full command words
9. Use distinct words

Command Language Design, March 18th, 2003

UPA/STC Montréal

6

Heuristics: Typing & Understanding

Easy to Type

- 10. Abbreviate with truncation
- 11. Be case-insensitive
- 12. Avoid shift keys

Easy to Understand

- 13. Give positive feedback
- 14. Ask for confirmation
- 15. Use rich error messages
- 16. Provide meaningful help

Command Language Design, March 18th, 2003

UPA/STC Montréal

7

I. Balance Power & Simplicity

Among UNIX experts, 5% of commands (20/400) accounted for 70% of those used (Kraut, 1983)

• Power

Many command words

`add-user`

`delete-user`

`edit-user`

Example:

`edit-user larry moe`

Less to type, more to remember

• Simplicity

Few command words

`add-user`

`delete-user`

Example:

`delete-user larry`

`add-user moe`

More to type, less to remember

Command Language Design, March 18th, 2003

UPA/STC Montréal

8

2. Use a Hierarchical Structure

A recursive tree-like information structure

Research:

- Free recall 2–3 times more accurate (Bower, 1969)
- 63% fewer recall & problem-solving errors (Carroll, 1982)

Value:

- Encourages deep levels of processing
- Each level is a mnemonic cue for the next
- Requires fewer command words

2. Use a Hierarchical Structure

✓ Do

```

move robot forward
" " backward
" " right
" " left
move arm forward
" " backward
" " right
" " left
    
```

✗ Don't

```

advance
retreat
right
left
raise
lower
swing-out
swing-in
    
```

3. Define Rules & Follow Them

Research:

- UNIX error rates 3%–50% by command
- High error rates for non-standard syntax (Kraut, 1983)

Example:

- 1–3 command words per command
Min: **exit** Max: **show ip statistics**
- 0–3 parameters per command
Min: **exit** Max: **add host** host_ip host_name port_num
- Unique first 2 letters for each command word
Do: **show** / **exit** Don't: **show** / **shutdown**
- Default values for most parameters

4. Model English: Overview

- Use words instead of symbols
- Use familiar punctuation
- Use parallel words
- Use the imperative mood with a verb > object structure
- Do not model English if it's inconsistent

4. Model English: Research

Compared an English-like text editor with a notational editor:

replace "go" with "gone" vs. `rs:/go/,/gone/`

- Included novice and experienced users
- 76% more tasks completed with the English-like editor
- 49% fewer errors made
- All users preferred the English-like editor after using it
- Experienced users who preferred a notational editor before the study changed their minds after

(Ledgard, 1980)

4. Model English: Words & Punctuation

	✓ Do	✗ Don't
Use words	<code>show file</code>	<code>ls</code>
	<code>delete file</code>	<code>rm</code>
Avoid symbols	<code>delete file all</code>	<code>rm *</code>
	<code>or d f a</code>	
Use familiar punctuation	<code>replace 'go' with 'gone'</code>	<code>rs:/go/,/gone/</code>
	<code>add record</code>	<code>add.record;</code>

4. Model English: Use the Imperative

Tell your computer what to do:

~~Subject~~ > Verb > Object

- **English Language**

Go!
Help!
Add sugar.
Find the book.

- **Command Language**

exit
help
add route
find file

- **× Don't**

route add

4. Model English: Use Parallel Words

- Make related command words semantically & grammatically parallel
- 7 times more errors when nonparallel words were used (Carroll, 1982)

- **✓ Do**

enable ipsec
disable ipsec

insert record
delete record

- **× Don't**

ipsec on
disable ipsec

add record
kill record

4. Model English: Unless Inconsistent

- Task time, number of errors, number of help requests significantly reduced with consistent but non-English syntax (Barnard, 1981)

✓ Do

search message file
 save message ref
 delete message digit

✗ Don't

search for file in message
 save message as ref
 delete digit from message

Command Language Design, March 18th, 2003

UPA/STC Montréal

17

5. Model the Industry Standard

- Balance against other heuristics
- Cisco has 57% of the router market (Gartner Inc, 2002 a)
- Cisco IOS is close to an industry standard
- Follows many heuristics
- Doesn't always follow verb > object order

```

Cisco - Hypertext Terminal
File Edit View Call Insert Help
Router#show dhcp ?
lease Show DHCP Addresses leased from a server
server Show DHCP Servers we know about

Router#show dhcp server
DHCP Proxy Client Status:
DHCP server: ANY (255.255.255.255)
Leases: 0
Offers: 0 Requests: 0 Ackns: 0 Naks: 0
Declines: 0 Releases: 0 Bad: 0

Router#_

```

Command Language Design, March 18th, 2003

UPA/STC Montréal

18

6. Use Meaningful Words

- Meaningful words are easier to remember
- Avoid jargon unless your users think in jargon

✓ Do

`add`

`accounting`

`user-name`

✗ Don't

`concatenate`

`radius`

`network-access-identifier`

7. Use Shorter Commands

- Short-term memory is limited: 7 ± 2 (Miller, 1956)
- Can you pronounce it in under 1.5 seconds? (Schweickert, 1986)
- Shorter commands are easier to remember
- Shorter commands are faster to type

✓ Do

`map phone-number`

`add subnet`

✗ Don't

`add phone-number mapping record`

`add ip assigned address range`

8. Allow Full Command Words

- When given a choice, 37% of users never abbreviate (Benbasat, 1984)
- If the full word was not known, users forgot twice as many abbreviations (Grudin, 1985)

✓ Do	✗ Don't
<code>move</code>	<code>mv</code>
<code>remove</code>	<code>rm</code>
<code>copy</code>	<code>cp</code>

9. Use Distinct Words

- Words that look similar are difficult to read
- Words that sound similar are easy to confuse
- Words with similar typing patterns are easy to mistype (motor patterns for common words interfere with others)
- Words that start the same are difficult to abbreviate with truncation

✓ Do	✗ Don't
<code>send</code>	<code><u>s</u>end</code>
<code>find</code>	<code><u>s</u>earch</code>
<code>choose</code>	<code><u>s</u>elect</code>

10. Abbreviate with Truncation

- Having an abbreviation rule improves recall
- Users recall more with a rule than when they make up their own abbreviations
- Simple truncation is the most effective rule, especially for encoding (Ehrenreich, 1985)
- Well-known acronyms can be used instead of words

✓ Do

ethernet eth

show s

delete del

ppp ppp

✗ Don't

ethrnt or ethr

shw or sw

dlt

point-to-point-protocol

11. Be Case-Insensitive / 12. Avoid Shift Keys

- Case differences are hard to remember
IPSec or IPSEC or ipsec? eMail or email or e-mail?
- Shifted characters take longer to type
- Shifted characters are more error prone

✓ Do

disable ipsec

enable dynamic-ip

find 'user name'

✗ Don't

Disable IPsec

enable dynamic_ip

find "user name"

13-14. Make Conversation!

- Give positive feedback
- Ask for confirmation

	✓ Do	✗ Don't
Feedback	<pre>> add user jim99 jim99 has been added to the user database ></pre>	<pre>> add user jim99 ></pre>
Confirmation	<pre>> delete user jim99 Are you sure you want to delete jim99.[y/n]? ></pre>	<pre>> delete user jim99 ></pre>

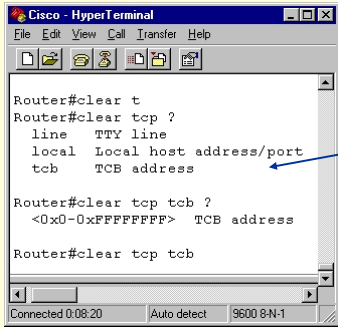

15. Use Rich Error Messages

✓ Do	✗ Don't
<pre>> add usr jim99 Did you intend to type: add user jim99 [y/n]?</pre>	<pre>> add usr jim99 Invalid command</pre>
<pre>> edit timeout You forgot to enter the timeout period. Use a value of 1-60 seconds.</pre>	<pre>> edit timeout Parameter invalid or missing</pre>
<pre>> edit timeout 65 The timeout period you entered is out of range. Use a value of 1-60 seconds</pre>	<pre>> edit timeout 65 Parameter invalid or missing</pre>

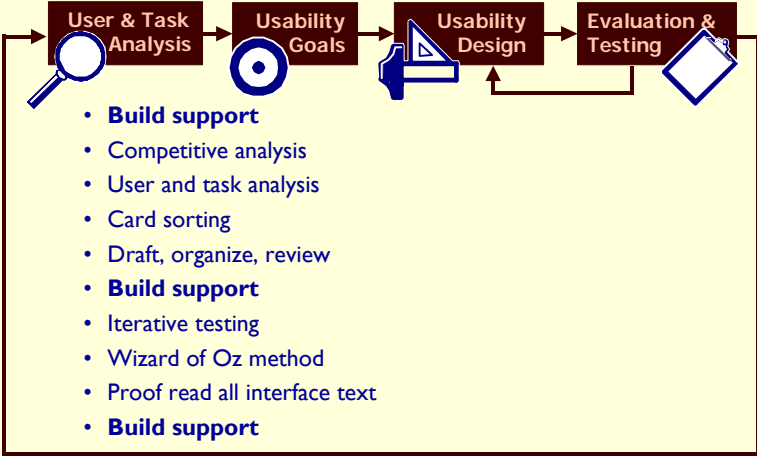

16. Provide Meaningful Help

- Make your 68 characters count:**
- Don't just restate the command word
 - Hint at what's to come
- TCB address in hex format**
